Dr. K. BHASKARAN

CENTRAL DRUG RESEARCH INSTITUTE

Lucknow, INDIA

regret. cancelled visit 10/64

dated 6th Sept '64

Dear Prof. Lederberg,

You may perhaps remember that a few years ago I was writing to you about the work I was doing with *Vibrio cholerae*. Later on I was busy with other things and only recently I have been able to resume this study. In a paper under publication in the Bulletin of the World Health Organization I have presented data from which reveals close linkage between pur and ilva and the probable sequence of seven genetic factors in *V. cholerae*, strain 162. A reprint of this paper will be sent to you as soon as copies are made available to me.

BHASKARAN

By the kind courtesy of the W.H.O. I have now been provided with an opportunity to visit your country and in all probability I expect to be in the State of California from 11th Nov '64 onwards for a period of three weeks. I will be grateful if you will kindly let me know whether I may visit your laboratory sometime during this period to have the pleasure of meeting you, Mrs Lederberg and other colleagues. Such a visit must benefit me considerably. I propose to spend sometime at Berkeley and Los Angeles as well during my stay in California.

Yours sincerely,

K. S. K. K.

Bhaskaran

Prof. J. Lederberg
Department of Genetics
Stanford University
Stanford, California.
